

Response এ প্রথম argument হবে Associative Array
দ্বিতীয় argument হবে HTTP Status Code

```
return response()->json([
    'message' => 'Invalid request data.', // 1st argument: data (associative array)
    400 // 2nd argument: HTTP status code
]);
```

1.Route বানালাম

```
1 Route::post('/get-response',[RequestController::class,'get_response']);
```

২.controller এ response return করলাম:

```
1 public function get_response(Request $request){
2     return response()->json([
3         "status"=>"Error",
4         "msg"=>"Data Not Recived",
5         "error_code"=>12345
6     ],400);
7 }
```

Output:
