

1. Make view using command

Blade File create করলাম।

\$ php artisan make:view forms.login

Layouts এর ভিতরে app.blade.php বানালাম।

2.

Parent layout এ static এবং dynamic content থাকবে।

Static content যা সব পেইজ এর জন্য একই থাকবে।

Dynamic Content যা Child page থেকে আসবে এটা কিভাবে ডিফাইন করব?

a.parent page/layout page এ @yeild দিয়ে ডিফাইন করব যার মানে এখানে child থেকে ডাটা আসবে।

b.child page/layout এ @section দিয়ে dynamic content দিব যা parent layout এ যাবে।

Child page এ @extends দিয়ে parent page এর ডাটা নিয়ে আসব।

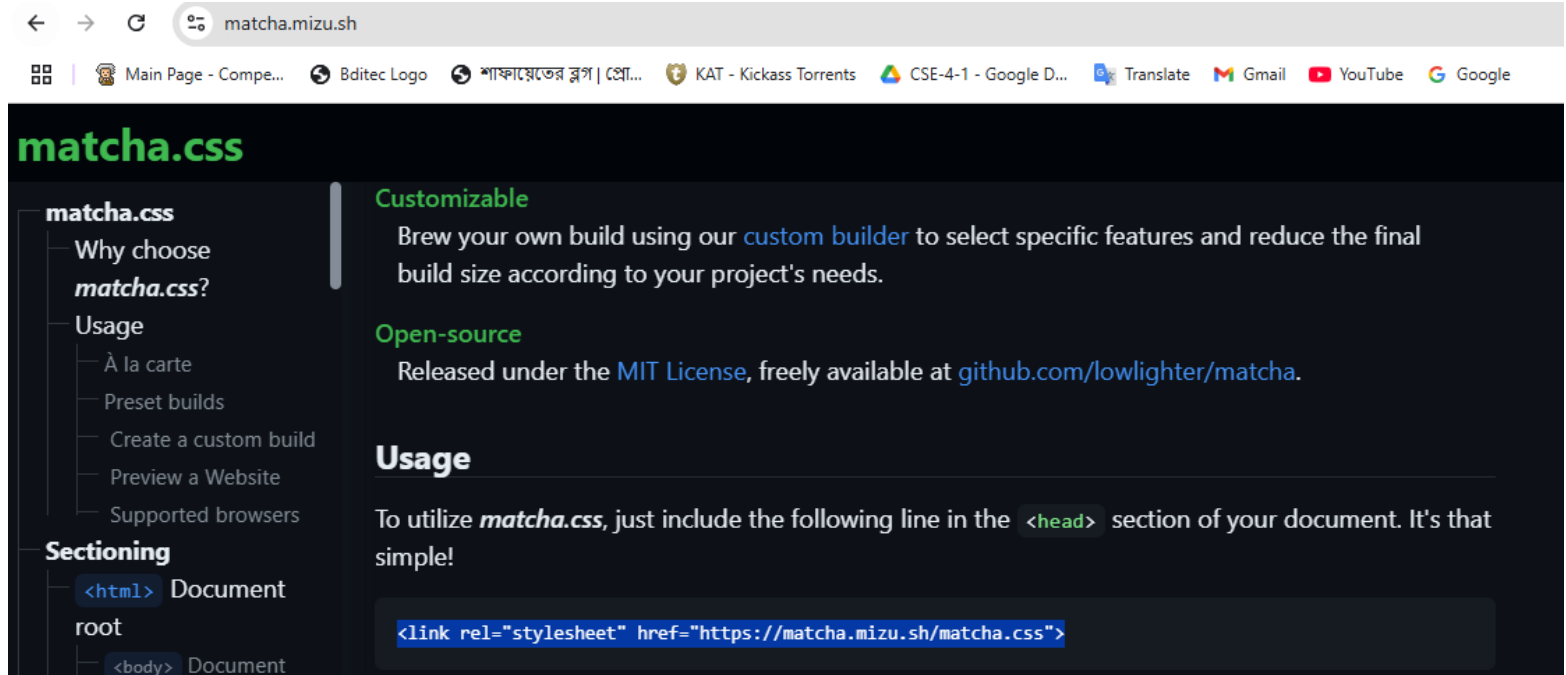

Key Points

1. `@yield` : Used in the parent layout to define placeholders for content that child views can fill.
2. `@section` : Used in child views to define the content for the placeholders defined in the layout.
3. `@extends` : Links the child view to the parent layout.

3.Create all steps for yields section extends

a. **matcha.css** cdn file include করব।

<https://matcha.mizu.sh/>

Title,body,Footer ইত্যাদি আসবে child view থেকে।

Layouts->app.blade.phpতে Template বানাব। static content গুলো লিখে ফেলব এবং যেখানে অন্য Blade থেকে ডাটা আসবে সেখানে @yield লিখব।

```
