A **Single Action Controller** in Laravel is specifically designed to have only one callable method, the __invoke() method. By definition, it cannot include additional methods for routing purposes because Laravel treats the __invoke() method as the single entry point for the controller.

Single Action Controller এর মধ্যে একটি মাত্র মেথড থাকতে পারে।

১.Controller বানাব।

```
User@DESKTOP-TSJIMAQ MINGW64 /c/xampp/htdocs/Module16AllCode
$ php artisan make:controller SingleActionController --invokable

   INFO  Controller [C:\xampp\htdocs\Module16AllCode\app\Http\Controllers\SingleActionController.php] created successfully.
```

২.Controller এর কোড লিখব।

```php
<?php

namespace App\Http\Controllers;

use Illuminate\Http\Request;

class SingleActionController extends Controller
{
    /**
     * Handle the incoming request.
     */
    public function __invoke(Request $request)
    {
        return response("I am from SingleAction Controller");
    }
}
```

৩.Route বানাব।

```
//Single Action Controller
Route::get('/single-action-controller',SingleActionController::class);
```

৪.আউটপুট

GET ∨ http://127.0.0.1:8000/single-action-controller   Send ∨

Params   Authorization   **Headers (11)**   Body ●   Scripts   Tests   Settings   Cookies

	Key	Value	Description
☐	API-KEY	xyz123	
	Key	Value	Description
